

Article 26

Appropriate for Fire Ladder Truck

- The current ladder truck (Ladder 1) is a 2004 Quint model that lacks capabilities provided by modern models and is increasingly difficult to maintain.
- The new truck will support more complex recoveries via a platform bucket capable of horizontal and vertical transport of firefighters and equipment.
- The replacement truck will also be a Quint – a ladder truck that has the capability to carry tank water for fire fighting purposes.
- The new truck will also improve firefighter safety.

The Select Board unanimously recommends adoption of this article.
